

Life just got even more comfortable.

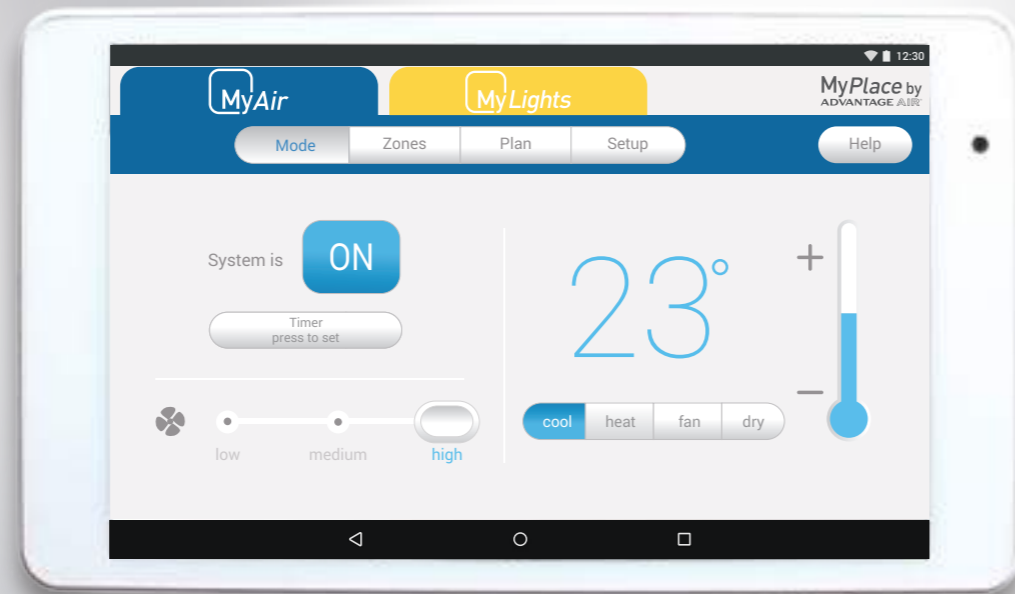

Ducted Air-Conditioning with Touchscreen

How MyAir makes home the ultimate comfort zone.

Comfort is feeling totally in control - so MyAir gives you 10 zones and the power to adjust the airflow to every room. Comfort is being surrounded by people who make you laugh - so MyAir's control panel lets you Facebook, email and watch crazy cat videos on YouTube. Also, comfort is reliability, that's why MyAir's components are made in Australia.

HOME HUB SMART TABLET

MyAir comes with the choice of a standard 8-inch colour touchscreen, or an optional upgrade to a 10-inch colour touchscreen. Both of these do double duty as an Android home hub. When connected to the Internet, it lets you check the weather, the family calendar, email, play music and order groceries.

MYAIR APP

Control the system from the comfort of your bed or couch. The MyAir App allows most smartphones or tablets to become a wireless remote control. (Apple iOS9.0 or higher and Android V4.2 or higher)

CONTROLS MULTIPLE AIR-CONDITIONING UNITS

Control up to 4 air-conditioning units from your MyAir touchscreen. The units can be different brands and located in independent buildings like a granny flat or studio.

MOTION SENSORS OPTION

Keeps your energy bills more comfortable by automatically reducing the airflow to empty rooms. When you walk back in, airflow returns to your chosen setting.

AUSTRALIAN-MADE

Our quality components are locally designed and made to withstand harsh Australian conditions. You have the comfort of a 10-year warranty on ducting and mechanical components, and 5 years on electronics.

COMPATIBLE WITH ALL MAJOR BRANDS

MyAir controls Samsung, Daikin, Fujitsu, LG, Panasonic, Toshiba, Hitachi, Mitsubishi Electric, Carrier, Midea and Mitsubishi Heavy Industries air-conditioners.

OPTION TO ADD MYLIGHTS

Make life even more comfortable by adding MyLights to your home. As it's also from Advantage Air, it seamlessly integrates with MyAir and works off the same touchscreen.

Take control with your home hub

MyAir's colour touchscreen is designed to be a complete home hub. The air-conditioning home screen displays the essentials: whether the system is on or off, set to heating or cooling, the set temperature and fan speed. However, with a touch of the Android icon, it switches to your other apps where you can check your email, play music, do the grocery shop, Google recipes, even Facebook while you cook.

The home screen gives you an overview of the air-conditioning status. Adjust the temperature from this screen, or tap through to zones to fine-tune the airflow to every room.

The touchscreen is permanently fixed to your wall, so it never needs recharging and it never goes missing in action! As everything from ordering school lunches to paying bills migrates online, having a dedicated tablet for the home makes everyday life a little more comfortable.

Your touchscreen doubles as an Android home hub - permanently powered and always there when you need it.

Intuitive tech

Like all the best tablets, MyAir's touchscreen is simple and intuitive to use. The entire system is designed to be technophobe-friendly. The home screen displays all your options - simply tap on what you want to do and follow the prompts. For example, when you tap on Zones every room in the house will be displayed. You can then increase or decrease the airflow to any room by tapping the + or - button next to it. Rooms with optional Individual Temperature Control sensors will display temperature while others display airflow %. We've even included a Help button in the unlikely event you need it.

One touch takes you to the zone controls, where you decide how much air goes where.

MyAir App for additional control

If getting off the couch to adjust the air-con seems like too much effort, don't. MyAir comes with its own app that effectively turns most smartphones or tablets in your house into a wireless remote control. The app works from anywhere your device has an internet connection (inside and

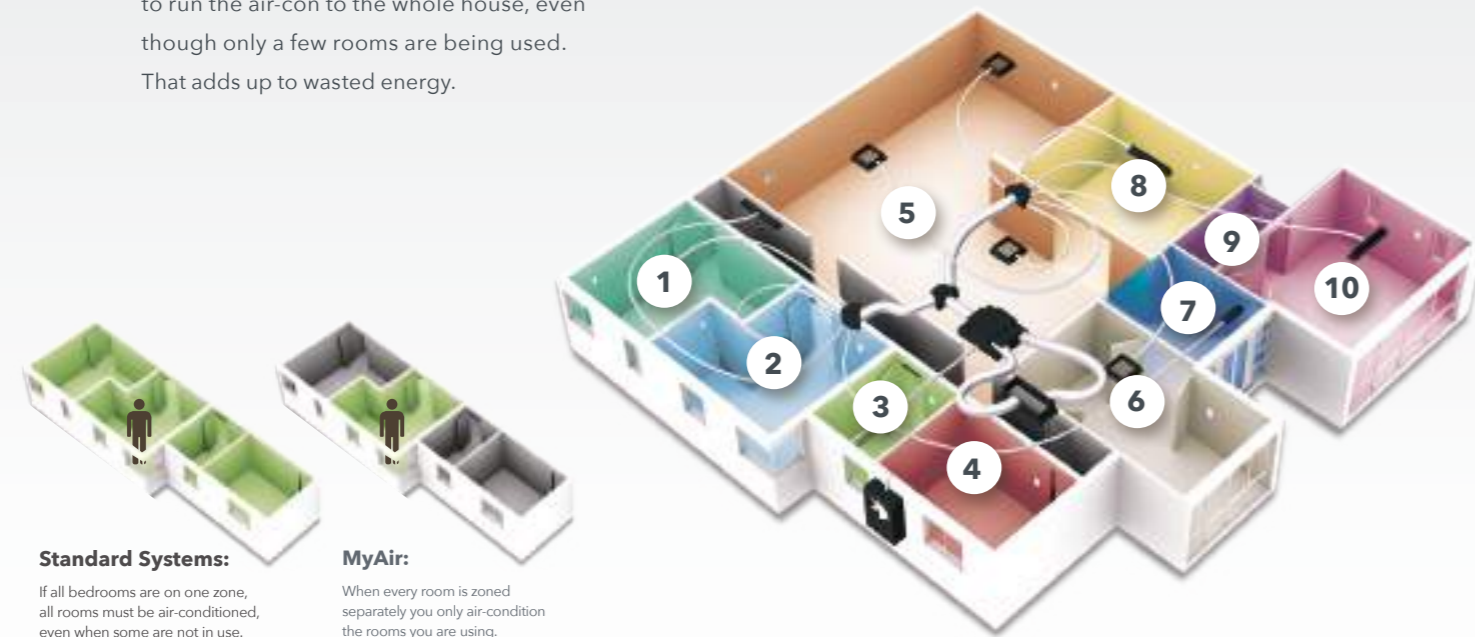

outside your home Wi-Fi area) on both Apple (iOS9.0 or higher) and Android devices (v4.2 or higher). Once MyAir is connected to a compatible home Wi-Fi network, you will also be able to access it remotely using your MyAir app from anywhere in the world.

10 zones keep energy bills comfortable

You don't have to be a maths whizz to figure out if the average home has 10 rooms, and the standard air-conditioning system has only 4 or 5 zones, you end up with multiple rooms in each zone. If four people are home, and everyone is using a different zone, you have to run the air-con to the whole house, even though only a few rooms are being used. That adds up to wasted energy.

MyAir looks out for your comfort, and your electricity bill, by dividing your home in up to 10 zones - one for every room. It allows you to heat or cool only the rooms you are using. More zones equals more control over energy usage.

Standard Systems:

If all bedrooms are on one zone, all rooms must be air-conditioned, even when some are not in use.

MyAir:

When every room is zoned separately you only air-condition the rooms you are using.

Control multiple air-conditioners from one screen

There are many reasons for having multiple air-conditioning units. Perhaps you live in a 2-storey home? Maybe you're on a smaller block and want to avoid noise pollution? Or perhaps you have a granny flat or separate studio? With MyAir, you can control up to 4 air-conditioning units from your MyAir. It doesn't matter if the units are all different makes - MyAir is compatible with all the leading brands.

Every unit is displayed on the home screen, so you can see the status of each unit at a glance. You can turn each one ON or OFF directly from the home screen. To unlock the full functionality of each system, simply tap the unit name to display all your options.

Scheduling and Timers

Not only can MyAir control up to 4 units from the one touchscreen, the units on the MyAir system can also be scheduled to start and stop by entering a "Plan" on the Plans screen. Any plan will apply to all units on the relevant MyAir system, i.e. turn them all on/off at the designated time. There are 10 plans available to set, and each plan can be run once per day, on any day of the week.

For situations where you only want one or some of the units to turn on or off, you can use the timer function for each unit to achieve this. Setting a timer is a once-off event and doesn't automatically repeat.

Optional Individual Temperature Control

Not every room in your home is created equal. There can be huge temperature discrepancies between rooms, depending on their orientation to the sun and whether they are upstairs or downstairs. With standard systems, hot and cold spots are unavoidable as they only have one thermostat, with no option to adjust the airflow to each room.

With MyAir, you have the ability to manually send more air to the hotter rooms. However, if you'd prefer everything to be adjusted automatically, there's Individual Temperature Control (ITC). Each ITC sensor is like a thermostat, giving you individual room temperature control. They instruct the system to continually adjust the airflow to maintain your selected temperature.

We particularly recommend installing ITC in the hotter west facing or upstairs rooms to ensure they stay the temperature you want as the day heats up. ITC in the baby's room will give you peace of mind knowing your little one isn't getting overheated or chilled. Sensors can be installed in as many rooms as you like, either at the time of installation or later on.

As ITC sensors ensure you won't be over air-conditioning rooms, they have the added bonus of saving energy.

More choice with MyZone

On your touchscreen, you'll notice one room has a dark grey thermometer symbol next to it. This indicates it has been selected as the MyZone, the room that acts as a thermostat for the system. MyZone can be any room with an ITC sensor, and it gives you more choice and control over how you run your air-conditioning.

For optimum comfort in summer, select the hottest room in your home as MyZone. This ensures every room with ITC will achieve the temperature you have set. The MyZone feature is optional - ask your MyAir Dealer about this feature.

Optional Motion sensors automatically save more energy

At Advantage Air, we get that people aren't sedentary animals. Over the course of the day you'll probably rotate between a few rooms - naturally you'll want the heating or cooling running in all of them. To help you save energy without even trying, MyAir optionally includes motion sensors in the rooms of your choice. When they signal a room has no motion for 10 minutes, the system automatically adjusts the rooms target temperature by + or - 1 degree. If the room still has no motion detected for another 10 minutes, the rooms target temperature is adjusted by a further + or - 1 degree. This small change is enough to reduce the room's energy usage by up to a hefty 20%. When you re-enter the room it will return to your original target temperature.

No Movement	Energy Saving	Temperature
10 minutes	10%	+1°
20 minutes	20%	+2°

Blue temperature indicates cooling

The secret to MyAir's airflow management

As we couldn't achieve the level of airflow control we were after with conventional dampers, we designed our own: the Exact Air Regulator. Instead of a single scoop it has Opposed Blade Dampers (OBDs). Think of them as a series of double doors that can open and close in 5% increments. These OBDs are the reason MyAir is able to supply air far more

precisely. As the air goes where it is needed, you achieve your preferred temperature as energy efficiently as possible.

The Exact Air Regulator rewards you with smoother, quieter, more even airflow, and rewarded Advantage Air with an Australian Design Mark award for innovation.
